45 years of precision

GÜNTHER GmbH
Temperaturmesstechnik
GÜNTER Temperaturmesstechnik

From the founding year of 1968, the name Günther remains the symbol of modern, state-of-the-art solutions in temperature measuring technologies. Having started with the production of electric temperature sensors for industrial furnaces, over time we have perfected and developed our experiences, extending our offer to numerous other sectors of the industry.

Today we are drawing on the foundation of 45 years of experience, based on the cooperation with our many partners and development of effective and efficient solutions for your individual applications.

Everywhere where precise measuring results in high temperatures are necessary, GÜNTER Temperaturmesstechnik has proven itself to be a modern, reliable and leading partner.
Sophisticated logistics and optimized production processes are prerequisites for a timely fulfillment of orders and the worldwide delivery of our products.

Moreover: Apart from the purchase and exchange of precious metals for our sensors, our customers may, of course, open an individual precious metals account.
SUCCESS THROUGH PREPARATION

Thanks to our four international production houses we are able to customize almost all of the required designs for our customers. Industry standard dimensions of precious metal protective sleeves, metal and ceramic tubes and thermocouple wire are always in stock, so that we can meet the needs of our partners promptly and flexibly.
In addition the continuous expansion of our knowledge at the international level remains another cornerstone of our company philosophy.

With a finger on the pulse of time and an eye on the future we provide our customers not only with modern and precise solutions, but we also lead the way in the field of temperature measurement.
Only then is it possible for us, on the one hand to respond to a variety of applications and offer tailor-made temperature sensors and – on the other – to be well prepared for the ever-changing and growing demands of the market.

Together these two elements form the philosophy of our company and drives us to provide for the diversity and best quality of our products.
QUALITY THROUGH ASPIRATION

Our over the years well-established quality management system, along with our internal calibration laboratory, allows us to guarantee the highest quality in all areas of our operation. The certification according to DIN EN ISO 9001:2000, a steady input and output control, the permanent training and development of our staff and high delivery reliability help us achieve that quality.
Our experience gathered over decades, a future-oriented and informed business structure, as well as the highest quality standards create the conditions allowing us to provide our customers with high-quality products.

Products that guarantee safety and result-oriented application.
We measure our performance against the goals of our customers and together with our highly qualified staff, we are able to find concepts and solutions ensuring good and reliable results to our customers.
